PRODUCT LEAFLET

Stand for videoconferencing

062.2805 VideoConferencing stand-trolley for 2 screens 46 - 55 inch (economy version) incl. 172.0090, 2x 172.0030 (2025 mm), 2x 172.0300

Videoconferencing is a set of interactive telecommunication techniques, which allows two locations to exchangeinformation at the same time (with vision and sound). This form of visual collaboration is used by companies to meet with their subsidiaries or international partners saving travel costs and time. For videoconferencing, the end-user is often looking for a mobile solution to which two screens, a codec and a camera can be attached. The set would then be suitable for use in multiple rooms. SmartMetals has developed a wheeled stand, suitable for two displays up to 55 inch, with a codec and camera support.
